

YOU'LL FIND US INTRODUCING A NEW GENERATION

**Until now naval radars were scattered over a ship's topside.
Thales' Integrated Mast marks the beginning of a new generation:
integrated and non-rotating.**

The Integrated Mast redefines the appearance of naval vessels. It integrates all of the sensors and antennas on board of a naval ship into one mast. The Integrated Mast offers top performance through the use of sophisticated technology. The unobstructed 360° view greatly improves situational awareness. Life cycle costs are reduced thanks to one common infrastructure for all sensors. The Integrated Mast also reduces shipbuilding time as the installation of the mast is a simple plug-and-play operation. Antenna test and integration activities have already been performed by Thales simultaneous with the construction of the ship.

**The Integrated Mast confirms Thales'
number 1 position in naval sensors.**
